

## Ecommerce Market Place (Commerce as a service)

### Overview:

Commerce as a service based on multi-vendor market place platform supporting smooth setup of individual stores, hassle free shopping experience for endusers, real time management of orders, promotions, rewards setup, offer management, inventory control, individual store and platform dashboard.

### Client details:

Name: Confidential | Industry: Commerce as a service | Location: Bhubaneswar

### Technologies:

React native , Visual studio, postgres sql database, Django rest apis

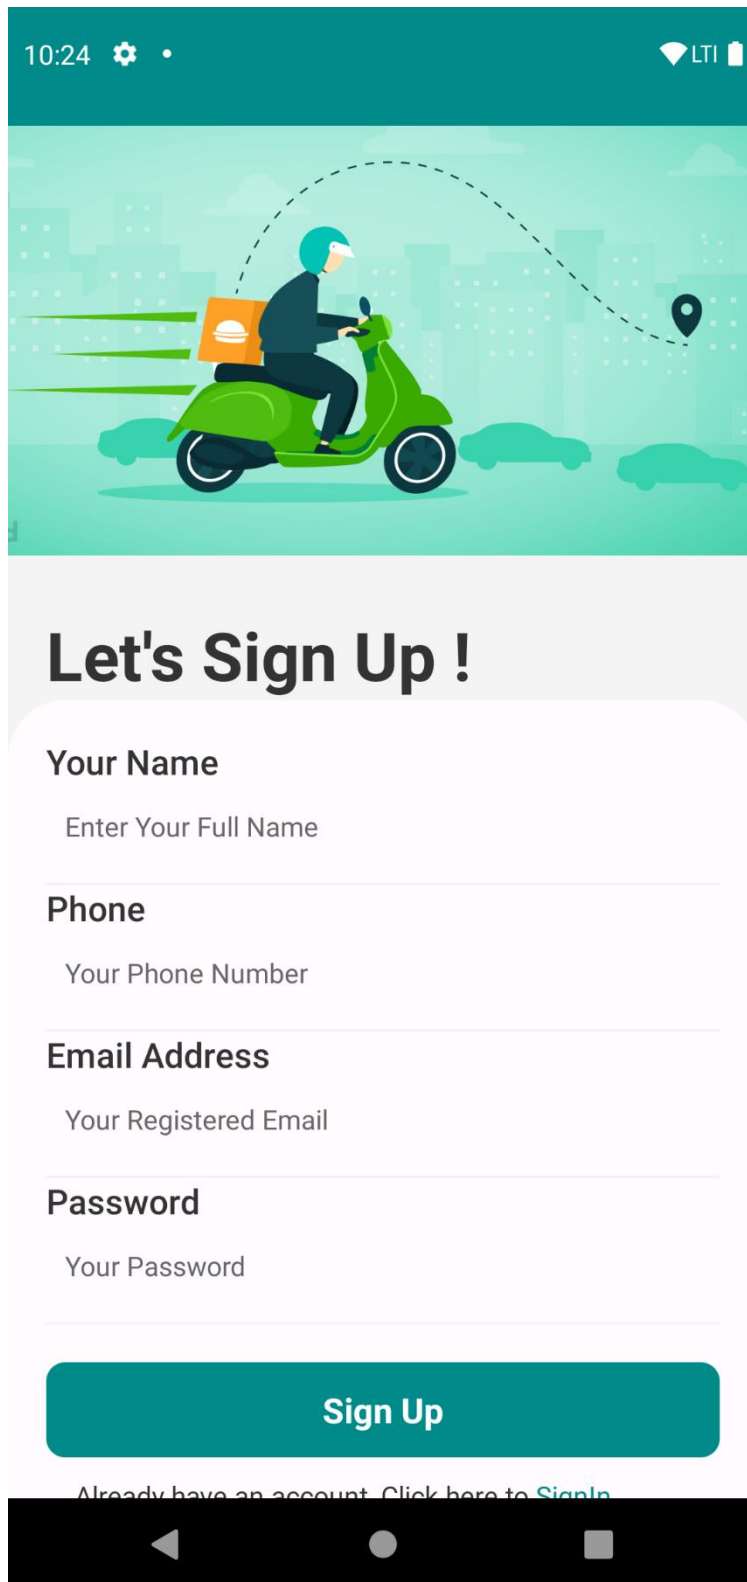

### Project Description:

Basically the client have some ware house to store their products and some delivery boys have to deliver the products. It was quite difficult to track the products and people. So he need to use a user-friendly UI which would be use to store products and for individual wear house manage the people.
