# **Job Portal**

#### **Overview:**

The project involved developing an application using PowerApps, Power Automate and SharePoint list for a job portal website for a company.

#### **Client details:**

Name: Confidential | Industry: IT

### **Technologies:**

Office365, PowerApps (Canvas Apps), PowerAutomate (Custom Connector)

### **Project Description:**

Job portal application is a common scenario. Here a candidate can register through providing basic information, qualification details, previous experience details, and candidate also upload resume through this app.

The project was successful and Some of the salient features are as follows:

#### **SharePoint List:**

In this project all the main functionality happened in this back-end technology SharePoint list. When candidate submitted the details, all data will stored on this SharePoint Lists, from where we are performing all the CRUD Operations.

## PowerApps Welcome Input Screen.:

This screen will be starting screen where candidate or HR will select required option to login to their page.

## **PowerApps Candidate Input Screen.:**

This screen will be landed screen for candidate where he/she will put all the like basic details, qualification details, experience details, upload resume and submit the form, so that all the details will get stored in SharePoint list, In this form tab format is also there which make user easy to input the data, Once data is submitted the flow will trigger and a message will send to HR teams with details.

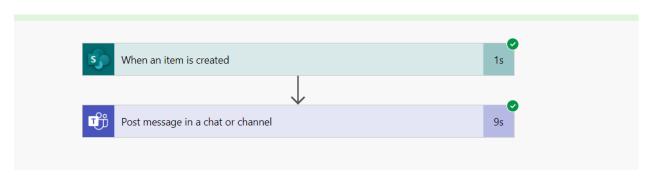

## PowerApps HR Input Screen.:

This screen will be landed screen for HR where HR can see details of the applicant and will put the details of result and submit the form, so that all the details will get stored in the SharePoint List. In this page, modern gallery format is also there which make HR easy to get the data. Once selection process has been over then HR can update status of the candidate.

#### **Microsoft Flow Run Success:**

Once candidate submit the details the message has sent to teams where HR will get all details of applicant.

This project is successfully completed by using the above-mentioned technology, process and it is maintaining the requirement of the client.
